German UPVC doors & windows

| Energy efficient | Sound proof | Eco friendly | Termite proof | Durable | Secure |

Exceptional UPVC windows
- FULLY IMPORTED -

TITANIUM TECHNOLOGY

Widest Range of Options and Features

A wide selection of profiles, colours and other useful features such as insect screens, click-on profiles and integrated ventilation units are available upon request.

All options fulfill European standards for Energy saving requirements and security.

Profile: Comfort MD, Double glazing, Walnut

WOHNRAUM German UPVC doors & windows are available in 27 different colours & designs, including a variety of stunning wood decors. Dual-color options are available upon request.

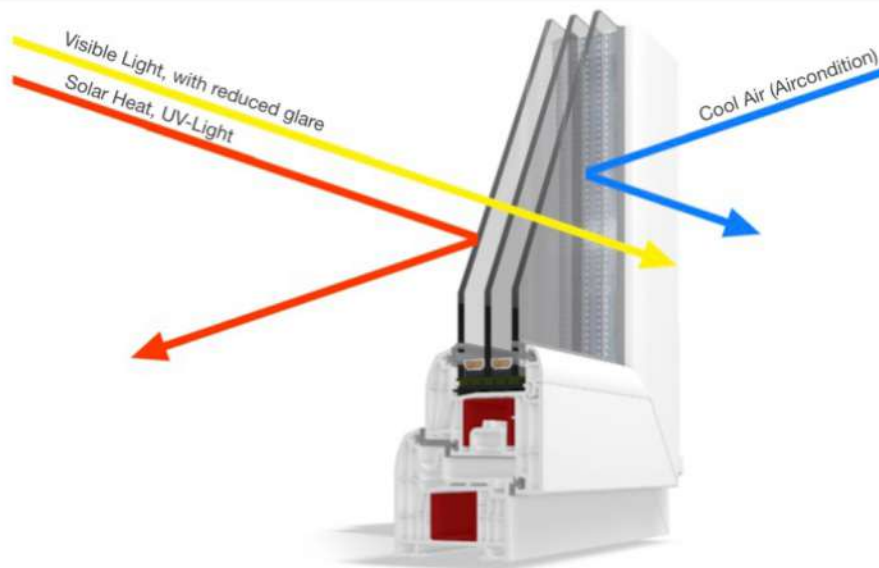

Thanks to modern technology we are able to produce high quality windows with aesthetics never seen before - with almost **invisible welds!**

The new weld is perfectly flat and its strength is much greater than the standard welded joints. Gaskets in the corners maintain their softness, which increases protection and insulation against wind, noise and temperature differences.

Tilt & Turn

Unlike most windows in Indonesia, WOHNRAUM UPVC doors & windows come with a Tilt & Turn double function at no extra cost:

- Handle down: closed (window is securely locked)
- Handle horizontal: turn (window opens up to 180° to the inside)
- Handle up: tilt (window opens on the top)

Advanced Double Glazing

- Less heat
For more comfort in your home or office
- Less glare
For a bright yet comfortable ambience
- Less UV-damage
For long lasting interior finishes
- Less airconditioning
For well-being and energy saving
- Less noise
For less disturbance and a better sleep

What makes Advanced Double Glazing so much better?

The difference between standard double glazing and Advanced Double Glazing is the addition of argon gas between the glass sheets and the usage of Low-E (low-emissivity) glass. Low-E glass has a transparent metallic coating that minimizes the transmission of harmful ultraviolet and infrared light while allowing visible light to pass through. The Argon gas gives the glazing unit a better heat insulation and it makes **WOHNRAUM German UPVC doors & windows** more soundproof.

The inside of the building remains quiet, and cooler for longer while UV-damage to the interior is drastically reduced.

Product Characteristics

WOHNRAUM German UPVC doors & windows are fully imported and then installed by our trained service team. The multi-chamber profiles with a depth of 70mm or 88mm and special glazing units ensure highest performance for a safe, cool and quiet home or workplace.

Experts in doors and windows!

WOHNRAUM German UPVC doors & windows are manufactured by Budvar Centrum (Poland) in one of the most modern and automated window factories in the European market. The production takes place in a ISO 9001 : 2000 certified, production plant with more than 300 employees.

The factory has a capacity of producing 2000 units a day and has already produced and sold over 1 million doors and windows.

The widest range of windows on the market.

Because our windows are fully imported and not assembled locally, we can offer the widest range of profiles, glass types, colors and other optional features and still guarantee the highest accuracy and production standards. Our promise:

'You get exactly the same doors and windows as in Germany - same glass, same hardware, same everything!'

Profile, Hardware and Glass suppliers include; but are not limited to:
