

SOLUTION FOR LIFE

Quality Building, Maintenance and Lifestyle Solutions with Sustainability in Mind

ABOUT US

ecoSmart (PT. LITTLE TREE) started operations in Indonesia through a German subsidiary back in 1998 prior to establishing an Indonesian company in 2004 and 2008.

VISION

ecoSmart aims to be the leading provider of innovative environmentally friendly products and services to conserve natural resources and increase environmental awareness while contributing sustainably to a triple bottom line introducing our One-Stop-Solution approach.

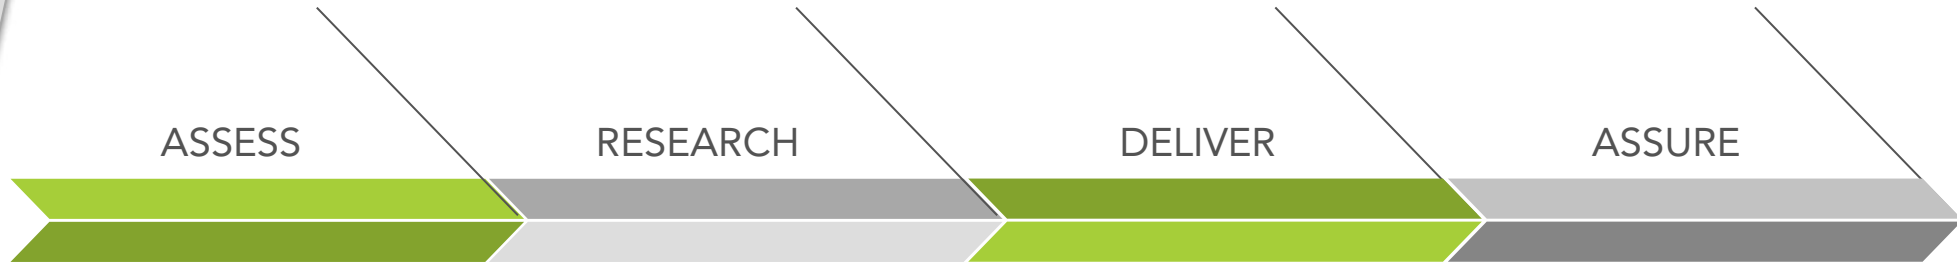

MISSION

ecoSmart is working as an associated Green Team in partnership with the leading businesses in our industry, We assist new developments and existing operations to reduce their ecological footprint and to improve their bottom line by reducing operational costs and maintenance time.

ecoSmart selects its partners and solutions based on a rigorous sourcing process that includes claim verifications, product tests and trials as well as after sales services to ensure peace of mind for our customers. ecoSmart supports social and environmental initiatives in line with our vision

HOW WE DO IT

Instead of offering a one product fits all approach, we assess and analyze our client's individual needs, problems and challenges to fully understand the underlying causes and in order to find the most suitable long term sustainable solution

Within our extensive professional network of suppliers and experts and even outside of it, we are identifying the most suitable or in some cases a variety of options that will provide for a long term sustainable solution for new and existing projects.

As part of our one-stop solution approach we ensure that the solution offered can be locally maintained and serviced and the supplier or service provider has a reliable after sales track record. This also includes availability of spare parts and locally appointed resellers.

We represent our clients interest and will make sure that suppliers and service providers are verified, compliant and provide the best possible service and solution during and after implementation to ensure long life and low maintenance with Sustainability in Mind.

ecoSmart aims to be the leading provider of innovative environmentally friendly products and services to conserve natural resources and increase environmental awareness, while contributing sustainably to a triple bottom line.

ecoSmart is working as an associated Green Team in partnership with the leading businesses in our industry, who have extensive experiences working in Indonesia and the region and understand local conditions and challenges.

ecoSmart's Green Team assists new developments and existing operations to reduce their ecological footprint and to improve their bottom line by reducing operational costs and maintenance time.

Highlighted Brands

Distributor

CONTEC – www.contecfiber.com

Leading Brand for Synthetic Fiber Reinforcement with static calculation support

BONA – www.bona.com

Leading brand for Wood & Resilient Flooring coatings and maintenance

DECKWISE – www.deckwise.com

Leading Brand for Hidden Wood and Composite Deck Fasteners

DASSO - www.dassoxtr.com

Fused Bamboo decking, cladding and lumber with 25 year limited warranty for outdoor

Environmental Products – www.epasia.net

Eco Friendly Construction chemicals, Sealers and Cleaners

D2W – www.symphonyenvironmental.com

Leading Brand for Oxo-Biodegradable additives for Plastic manufacturing

Highlighted Brands

Authorized Agent / Reseller

WIKA – Solar Water Heaters, Aircon Water Heaters and Heat Pumps

KT and JRT – Reclaimed Ironwood & Teak flooring and decking, veneer for wall and ceiling decor

ACCOYA – www.accoya.com – 25-50 year outdoor warranty imported pine wood for decking, cladding and structures

B-PANEL – www.b-panel.com – Licensed manufacturer for modular lightweight and earthquake resistant building systems

EGGER – www.egger.com – Leading brand for high quality Laminate flooring

FALCON – www.falconwaterfree.com – Leading brand for water free urinals

FIRMFIT & NOC–Rigid Stone Composite abd – Luxury Vinyl Tile flooring

BASF - Selective range of industrial sealers and additives

ecoSmart Works

www.ecosmartworks.com/project-gallery

ecoSmart Works is a specialised woodworking contractor, offering a wide range of services from new installations, renovations, maintenance of wooden flooring, decking, ceiling and wall cladding to customized carpentry work.

Over 200 completed project references with more than 30,000 sqm sanding & finishing and more than 10,000 sqm installed flooring & decking.

We pride ourselves in the quality of our work, on time delivery, reliability and customer service.

Due to our investments in the best tools and equipment available, such as BONA Sanding Machines, Primatch Nailers, HILTI Drills and Deckwise IPE CLIP we have become the leading woodworking contractor for flooring and decking renovation projects on the island with a speed next to none.

Installation of flooring and decking varies depending on each projects requirement, but we always inspect a site prior to quoting to ensure that the correct installation method is applied.

For flooring installations we offer glue down and floating installations as well as nail-down on joists.

For decking installations we offer screw down with wooden plugs or our Hidden Deck Fastener System.

For sanding and finishing we use a Dust-Free system and we can offer a wide range of quality finishes (Oil, Hard-wax Oil, Water-Based) suitable to the projects needs from residential to heavy traffic .

ecoSmart Concrete

www.ecosmart-concrete.com

ecoSmart Greensense Concrete (now ecoSmart concrete) is a highly efficient, energy saving and cost effective way of using structurally sound reinforced concrete for a range of applications.

The difference compared to standard reinforced concrete is that this system massively reduces or completely removes the requirement for steel reinforcement within concrete.

Instead a one of a kind, world patented system of synthetic reinforcement (CONTEC) fibers are used.

This structural method has been in use for over 30 years all over the world for a number of high profile projects. In Indonesia it has been successfully used in a range of developments.

ecoSmart Concrete

- Cost

In material alone, the cost savings can be up to 20% as the CONTEC fibers are significantly cheaper than the price of steel.

- Time

The concrete comes with the fibers already mixed in during the pour. The benefits can reduce labor hours and placement time, providing significant job savings.

Therefore months can be saved compared to the time it takes to prepare steel reinforcement especially on large projects.

- Longevity

The synthetic CONTEC fibers do not corrode and will far outlast the lifetime of steel which is prone to rust, concrete cancer and degradation especially where good waterproofing additives are seldom used. It is also resistant to fatigue, a common problem when consistently heavy loads are involved.

- Cracking prevention
The fibers infiltrate all parts of the concrete which bind the mass of the concrete together, creating great quality concrete which reduces plastic shrinkage cracking.

- Reduces bleed water
The combination of additives and fibers, when produced to the correct mix design, ensures that water is well distributed throughout and stored, thereby reducing bleed water and ensuring good bonds.

- Strength

Unlike conventional reinforcement which works in two dimensions, the fibers create three-dimensional reinforcement. Therefore its point load resistance, impact resistance as well as flexural strength is exceptionally high.

- Self leveling and distribution
With the use of specific additives within the mix, the concrete seamlessly distributes throughout the formwork thereby lessening the need for vibration, effectively removing air bubbles and reducing honeycombing. On a floor, the concrete settles smoothly without lumps or ridging. When trowel finished, there is no need for extra toppings and if required can be polished upon directly.

- Lower carbon footprint
Steel is one of the most energy consuming materials to produce and construct. With the significant reduction of this within a project, plus the reduction of cement while still achieving the required strength, it can contribute greatly to the sustainability of a project.
